

# Service Description

## *Security-Workshop*

---

### **What** is it about?

#### **Security Checkup for Your Intrexx Portal**

In this workshop, we will jointly analyze the security aspects of your portal and the applications used within it. The focus will be on identifying potential vulnerabilities and developing strategies to increase system security.

---

### **What's** included?

#### **Analysis and Strategy Development:**

- Identification of Attack Points: Our experienced consultants examine potential vulnerabilities and attack points within your portal and create a comprehensive security profile.
- Anonymously Accessible Applications: Analysis of applications accessible without user login to develop appropriate security solutions.
- Configuration Review: Evaluation and optimization of settings such as session duration and password strength to enhance user account protection.
- User Management Solutions: Development of strategies to secure user accounts, particularly with regard to common attack points.
- Modern Security Features: Implementation of validators, credential stores, and other Intrexx security mechanisms.

---

### What are the *advantages* of workshops with Intrexx experts?

Benefit from the expertise of our consultants and strengthen the security of your portals and applications. Together, we will develop customized security strategies tailored to the specific functionality of your portal.

Gain valuable insights into our working methods through the workshop and learn how to minimize security risks through proactive measures.
