

Tailor-made digitalisation for industrial manufacturing. With Intrex.

Integrate data from disparate sources, digitise manual processes, and develop customised applications at breakneck speed thanks to low-code and the power of Intrex.

With our *Low Code Platform*, digital solutions are created in the shortest possible time.

Departments can digitise internal processes independently.

- Applicant Management
- Customer Service and Support
- Invoice Management

Use your applications company-wide.

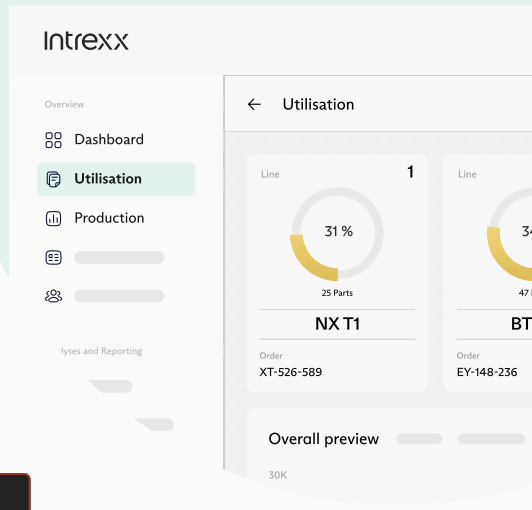

User Management

Intrex comes with advanced user management, allowing you to securely share data with selected individuals and groups.

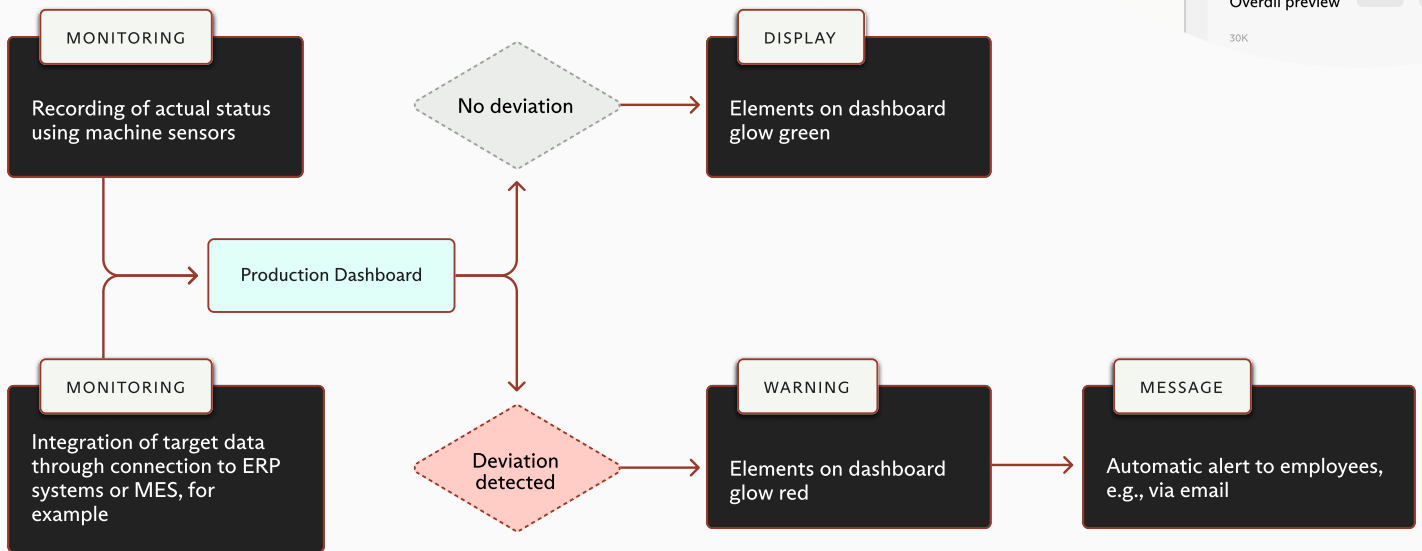

Make your digital ecosystem accessible to external parties and service providers.

Create *automated* processes with just a few clicks.

By combining logic modules, you can now digitise analog processes on the assembly line. You can integrate the processes directly into your applications.

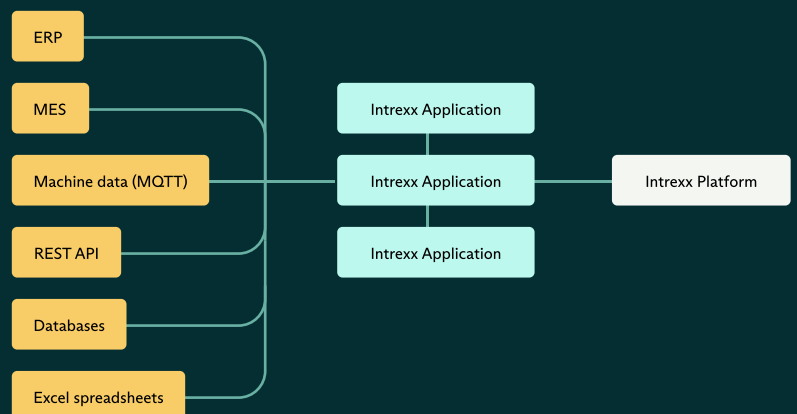

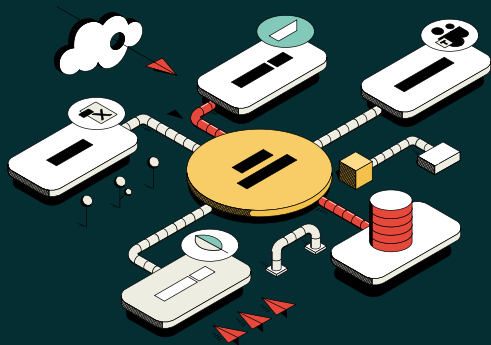

Example: Process for real-time production dashboard

Intrexx *doesn't* create data silos, but connects to your existing systems.

Integrate data from a wide variety of sources and make it available in your Intrexx applications. Intrexx can also be used as an interface or intermediary between existing core systems.

Automated *Machine Logbooks* revolutionise sheet metal production

With Intrexx, Hago GmbH digitised its machine logbooks through direct integration of the PLC control system. The automated solution eliminates manual documentation, optimises production processes, and enables efficient three-shift operation of the production facilities.

For ROI

Intrexx combines Functionality and *Security*

Made in Germany

Intrexx is developed, hosted, and distributed in Germany. Our 85+ employees also help customers develop tailor-made applications in collaboration.

Relieve your IT

Over 60% of enterprise applications are developed by professionals without IT skills. This allows IT specialists to focus on more demanding projects.

Cloud and On-Premises

Intrexx offers flexible hosting options. Choose between our GDPR-compliant cloud on German servers or your own infrastructure.
