

Intrex empowers *public authorities* to *digitise* their administrative processes.

Unify data from multiple sources, digitise workflows, and develop tailored applications at speed — all possible with low-code and the power of Intrex.

With our *low-code platform*, you can create applications in no time.

You can also make applications accessible to external users or institutions.

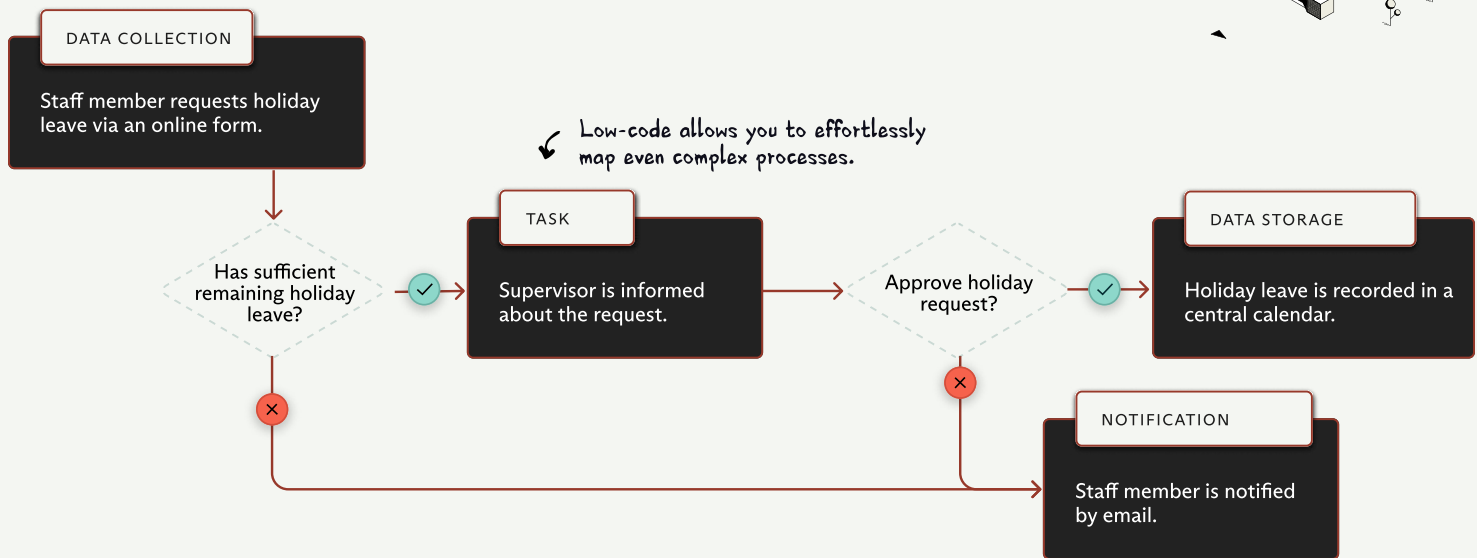

User Management

Intrex provides advanced user management, allowing you to securely share data with selected individuals and groups.

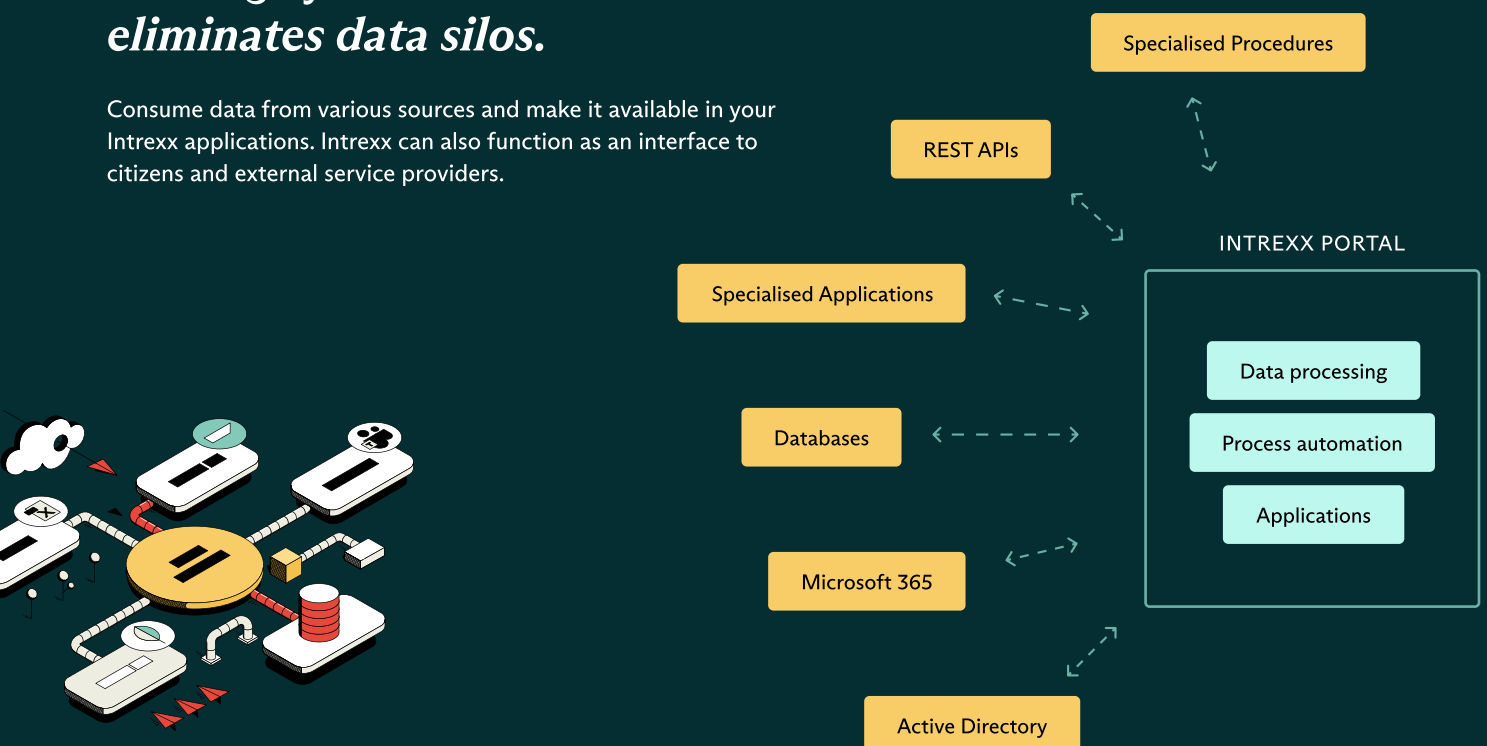

Create *automated workflows* with just a few clicks.

By combining logic building blocks, you can now digitise processes on the assembly line. You can integrate these workflows directly with your applications.

Intrex integrates your existing systems *and eliminates data silos.*

Consume data from various sources and make it available in your Intrex applications. Intrex can also function as an interface to citizens and external service providers.

Berlin Senate Administration *digitises day-to-day operations* with low-code.

With Intrexx, a **digital workplace** was created that digitises processes, preserves knowledge, and enables flexible working. The result: a future-ready and attractive administration.
