The world's biggest **Agentic Transformation**: How Allianz Partners targets **€300M** in Incremental Profit

E2E agentic transformation
delivered in a single platform.

- **Global End-to-End Agentic Automation**
across 5 insurance lines and >30 countries
- **No change in infrastructure required.**
APA deployed as an intelligent layer on top of existing systems.
- **Automation instead of augmentation.**
Moving up to 90% of manual work to computers.
- **Entirely replacing RPA as patch technology.**
Replacing task-automation with end-to-end Agentic Automation.

Get the case study by HFS:

€300M /YEAR

Incremental profit by 2027

29 → 3.5 DAYS

Average claim handling time

2.5 MONTHS

From zero to production

+30 PERCENTAGE POINTS

Increase in Net Promoter Score

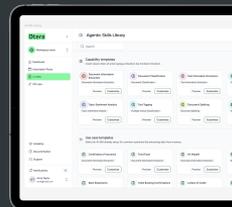

Responsiveness will be the decisive change that drives both productivity and customer success. It will take our margins to a different level.

Tomas Kunzmann, CEO, Allianz Partners

Otera is your Business Partner to maximize Business Value with Agentic AI.

Otera Studio: Purpose-built and native Agentic Platform optimized to deliver the highest STP (Autonomy) rates without sacrificing control and governance.

ACV Framework: Practical blueprint to drive Business Value
We bring the blueprints and best practices how to maximize ROI and deliver tangible business value with AI Agents.

WHAT WE DELIVER FOR CUSTOMERS:

SIEMENS

Powering P2P, O2C and logistics processes across 130 factories worldwide.

Allianz to cut up to 1,800 jobs due to AI advances, says source

Otera is a native Agentic Automation platform, purpose-built to deliver **Business Value**.

Definition

Autonomy

The Engine

The proportion of work genuinely **Straight-Through Processed (STP)** without human touch

X

Control

The Guardrails

The system of **policy, regulatory, and risk gates** that ensures safety and auditability

X

Velocity

The Accelerator

How quickly we can **ship new value** and learn from live production data

Why it matters

Without this, there is no efficiency gain

Autonomy without **Control** is chaos. We cannot scale what we cannot trust

Control without **Velocity** is bureaucracy. If change takes months, the model drifts and fails.

 In a Nutshell

An unsafe system (zero **Control**) or a frozen system (zero **Velocity**) results in zero value, regardless of how powerful the AI model is

Siemens chose Otera to automate Procure-to-Pay

Scaling **Procure-to-Pay** automation from local pilot to global production in **<3 months**

~1.4M
Invoices Processed
VOLUME

99.8%
Global
Accuracy Rate
Accuracy Rate

<3 Months
Contract → Live
SPEED

87%+
automation Rate
STP

"After evaluating many document understanding tools, we adopted Otera because of the AI accuracy, ROI, and ease of use by the team"

- **Michael Suckert**

SIEMENS

Business Case

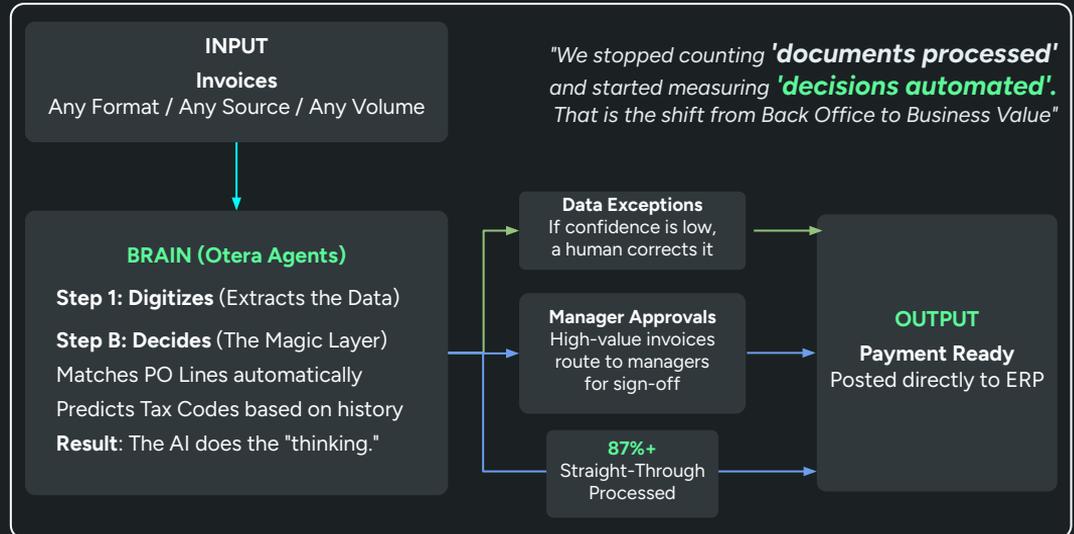

Old Way (Legacy OCR)

- **Creates Work:** The system reads the invoice, but humans still have to check the math, match the PO, and verify the vendor
- **The Pain: Volume = Cost:**
(Every new invoice required more human hours)

Siemens Way Powered with Otera

- **Creates Capacity:** The system reads and checks. It autonomously validates the business logic before a human ever sees it
- **The Win: Volume ≠ Cost:** (We decoupled growth from headcount, creating a blueprint for global expansion)

Engine

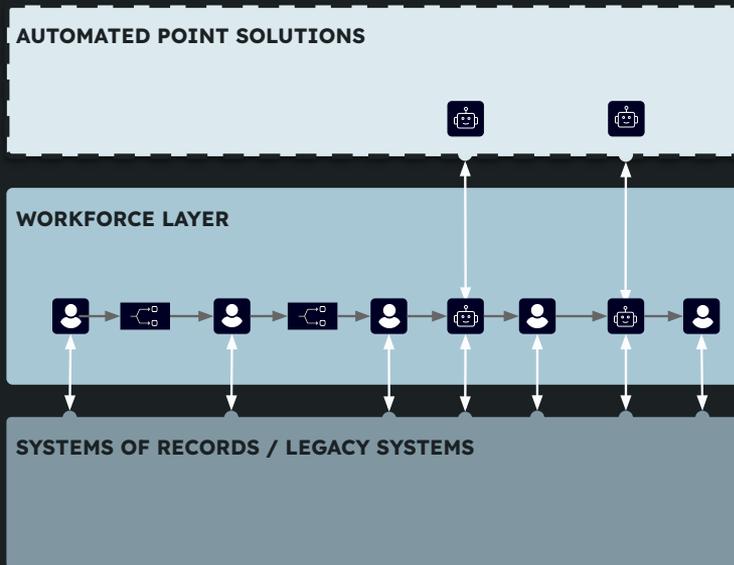

Transformative Business Value is only realized by shifting from **human-first** to **agentic-first** operations

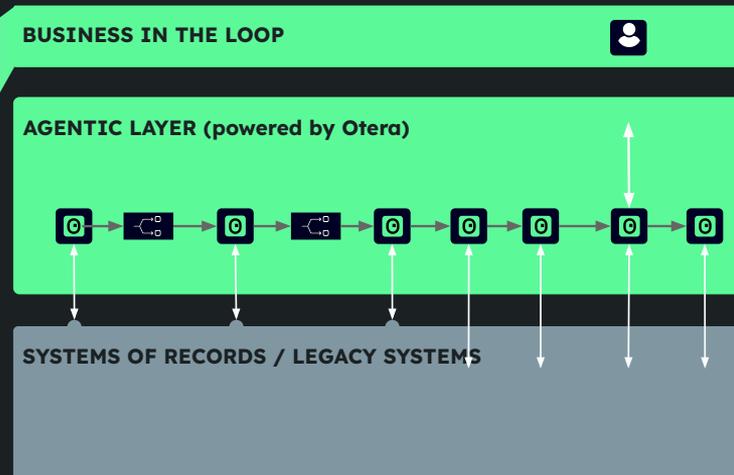

Human First

Manual or <15% E2E Automation Rate

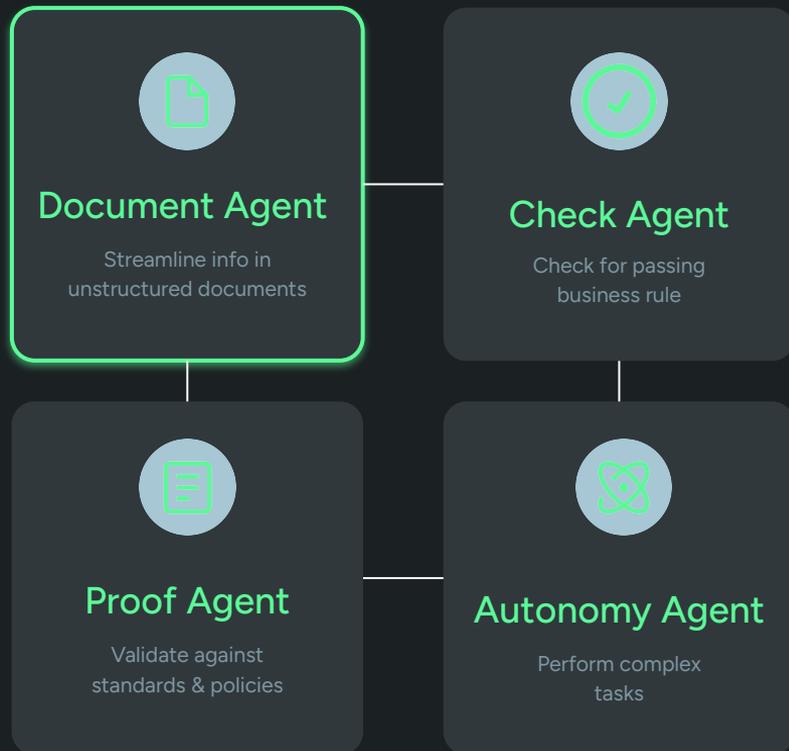

Agentic First

>80% E2E Automation Rate

A suite of **AI Agents** pioneered for **business process automation**

True Agentic-Native Technology

based on foundational research since 2018

The Intelligence Advantage™

The seismic shift from “Systems of Records” to “Systems of Intelligence” is already on the way and massively accelerating.

LLMs as the New Computing Platform

Agentic usage of LLMs allows machines to solve problems that were not possible before. They can now reason, plan and decide over messy unstructured data. The Turing Test is solved.

Strong Control via Unique Metrics

Achieving Straight-Through Processing (STP) and Autonomy is impossible without purpose-built algorithms, Performance Metrics and Confidence Scores.

End-to-End Traceability & Auditability

Seamless audit trails to comply with regulatory and compliance requirements while providing deeper insights than manual operations.

The Evolution from OCR to Document Agents

OCR < IDP < Document Agents

The new Standard for Intelligent Document Processing.

Classify

Document classification

Splitting

Split documents in multiple classes for better processing

Data Extraction

Extract data from a range of document types or plain text inputs

Content Analysis

Understanding complex issues in documents (e.g., contracts)

Chain Agents

Chaining AI models to combine different AI skills
+ Advanced Agents

Additional:

All Documents

- ✓ Unstructured documents/texts (*emails, contracts, letters, etc.*)
- ✓ Semi-structured documents (*Delivery Notes, Invoices, etc.*)
- ✓ Structured documents (*Forms, Checklists, etc.*)
- ✓ Multi-pages documents as a single or separate one

All Table Types:

- ✓ Nested tables
- ✓ Individual items with details
- ✓ Free flown text tables
- ✓ Multiple pages tables

Recognition of:

- ✓ Signatures
- ✓ Checkboxes
- ✓ Stamps, watermarks
- ✓ Handwriting
- ✓ Rotated documents
- ✓ Stained documents
- ✓ Low resolution

Other capabilities:

- ✓ Contextual understanding
- ✓ Confidence scores
- ✓ Detailed metrics
- ✓ Human-In-The-Loop
- ✓ Auto-Optimisation
- ✓ No Layout dependencies
- ✓ 100+ Languages

Additional features:

- ✓ Pilot in minutes
- ✓ Plain language customisation
- ✓ All file formats
- ✓ Full audit
- ✓ Batch processing
- ✓ 100+ prebuilt agentic skills

The Check Agent for complex business rules decisions

The screenshot displays the Check Agent interface, divided into two main sections: Agent inputs and Results.

Agent inputs: This section shows an execution log for an "Incident Date check". It details the following steps:

- Agent 9:53AM:** Calling tool `query_documents` to locate incident date.
- Agent 9:53AM:** Incident date found: 23/12/2024.
- Agent 9:53AM:** Successfully retrieved both dates for analysis.
- Agent 9:53AM:** Calling tool `compare_dates` to compute difference between 2024-11-24 and 2024-12-23.
- Agent 9:53AM:** Difference computed: 29 days.
- Agent 9:53AM:** Proceeding to evaluate rule "booking_date <= incident_date".
- Agent 9:53AM:** Rule satisfied (24/11/2024 is earlier than 23/12/2024).
- Agent 9:53AM:** Finalizing explanation and result.
- Agent 9:53AM:** Result: passed. Reasoning: The dates match the comparison given.

Results: This section shows a list of business rules, all of which have passed:

- Invoice is Present:** Result: passed. A tooltip indicates "Passport recognized as file passport.jpeg".
- Passport is Present:** Result: passed. Reasoning: I find the document in the attachments to the email.
- Country covered by policy:** Result: passed.
- Amount covered by policy:** Result: passed.
- Claim has invoice number:** Result: passed.

The overall result is **Result: Passed**.

Purpose

Validating complex business rules against unstructured data from multiple sources.

Capabilities

The check agent is designed to perform complex decisions on business rules. For example, it is capable of validating the consistency of details across multiple documents or validating that the total amount on an invoice adds up to all the line items.

Example Applications

Business rules from insurance claims, customer onboarding, invoice validation, among others.

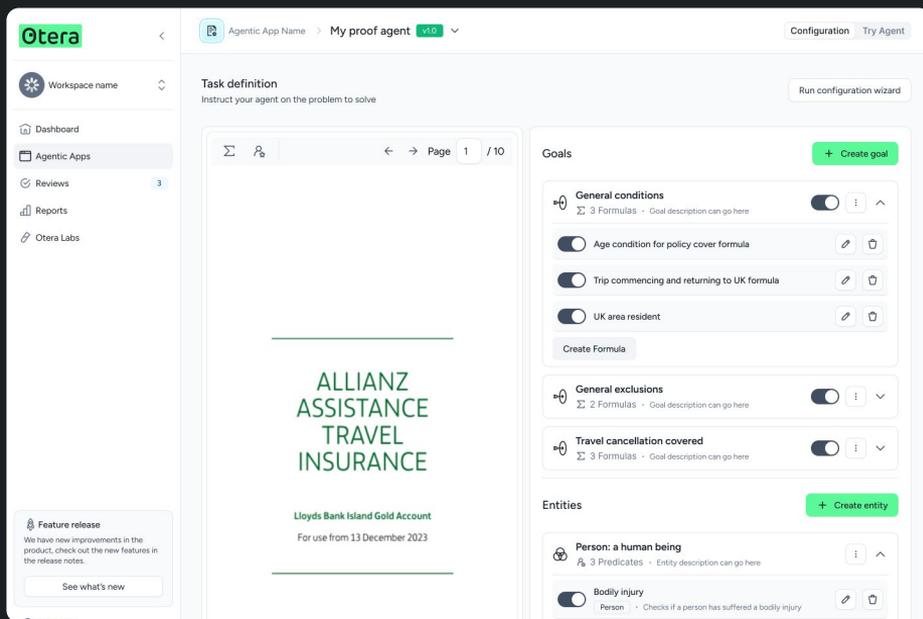

Business Value

- **Fast time to value** → Efficient capture of business rules using natural language instruction
- **Straight through processing (STP)** → validating complex cases while reducing dependency on human validation

The Proof Agent for validating against standards and policies

Purpose

Validating compliance of business transactions by comparing against sets of standards or policies

Capabilities

The proof agent can ingest complex documents such as a regulatory standard or a policy document and validate that the clauses in such a document are met by the processed business transaction.

Example Applications

Policies from insurance claims, or banking standards for customer onboarding, loan QC, among others.

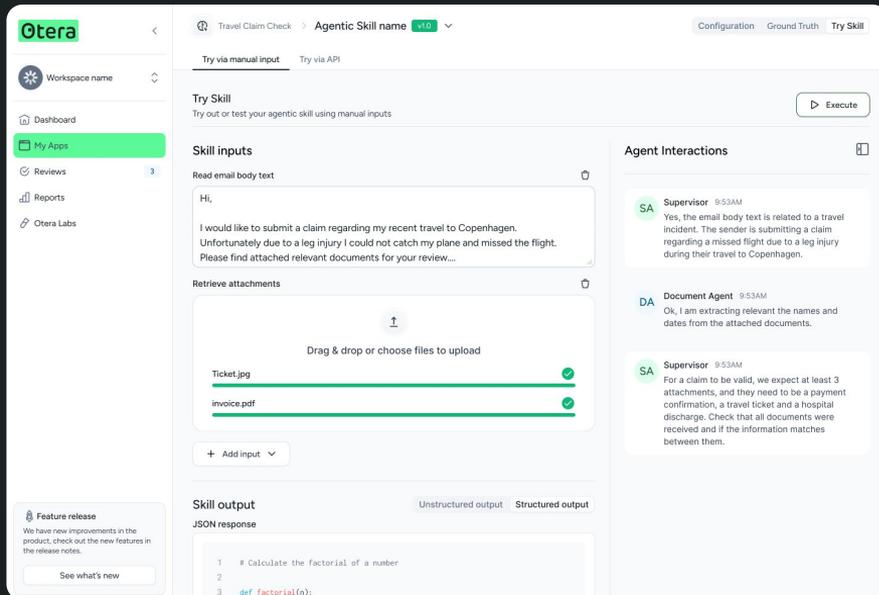

Business Value

- **Fast time to value** → Efficient capture of policies and standards by using reference documents
- **Straight through processing (STP)** → validating complex cases while reducing dependency on human validation

The Autonomy Agent for performing complex tasks

Purpose

Run process tasks that are multi-step and require leveraging external tools and multiple data sources

Capabilities

The Autonomy Agent is the capability that moves from decisions to actions. It is versatile and capable of performing tasks where output is required based on process data and leveraging tools such as a calculator, code, MCPs, and APIs.

Example Applications

Run tasks such as amount calculation on a claim, interest rate on a loan, reconciling transactions, and updating records, among others.

Business Value

- **Fast time to value** → Efficient execution of process tasks using tools and natural language instruction
- **Straight through processing (STP)** → high flexibility in executing tasks while reducing dependency on human validation
